Sanitary Measures for “Drinking Water Refilling Station” in the Philippines

Hoshizaki Philippines Corporation, our group company in the Philippines, has accelerated selling ice machines to drinking water refilling stations to improve hygiene environment in the Philippines.

In the Philippines, with more than 7,500 islands, it is said that tap water is not suitable for drinking while water infrastructure has been developed. Generally, drinking water is purchased in barrels from tens of thousands of “drinking water refilling station” throughout the Philippines, and is used for drinking and cooking through dispensers. There are also stations that sell ice purchased from ice vendors in small bags.

In response to this growing interest in safe water in the Philippines, Hoshizaki Philippines has been selling ice machines to drinking water refilling stations. The ice machines have been highly evaluated for their reliability of ice made from drinking water, improved sanitation by reducing the number of times the ice is directly touched in COVID-19 pandemic, resistance to ice melting, and high cost effectiveness, and we have started full-scale sales activities to meet the growing needs.
